03. Exploratory Laboratory

Full story and 100% mission walkthrough

True Believer target: 100,000 studs.

Completion requirements: finish the story, achieve True Believer, collect all 10 minikits and rescue Stan Lee. These award four Gold Bricks in total: one for each requirement, with one brick for the complete minikit set. All ten minikits also complete this level's comic.

Before you begin

This guide covers the original LEGO Marvel Super Heroes console/PC campaign. Play the story route first, then return in Free Play for a complete collection run. Finish the campaign and unlock or purchase the additional characters you need before attempting every detour. The numbered minikits below identify this guide's route, not a separate numbering system shown by the game.

Free Play characters and abilities: Iron Man Mark 42 for flight, explosives, heat and consoles; Magneto for blue metal; Hulk for strength; Captain America for shield switches; Jean Grey for mind control and telekinesis; Mister Fantastic for grates; Thor for power; Wolverine for digging and claws; Venom for symbiote passages; Iceman for freezing; Galactus for cosmic construction.

Route warning: Start the four-gold-frame challenge in the very first room. Its last frame is in an optional laboratory, so do not drop into the basement until you have visited that room.

Reaching True Believer

Break the lab equipment and corridor furniture, then sweep the basement's different floors. The two optional laboratory rooms are valuable detours. Collect loose studs between enemy waves rather than standing in damaging symbiote pools.

You need 100,000 studs in a single visit to this mission; totals from separate attempts do not add together. Smash scenery, follow stud trails and recover dropped studs promptly after a death. Enabled stud-multiplier extras count towards the meter: with only x2 active, 50,000 ordinary stud value reaches this target. Check that the True Believer banner has appeared before ending or saving your run. You can earn it in Story Mode or Free Play.

Full story route

Team: Black Widow, Hawkeye and Spider-Man

Goal: Follow Green Goblin into Oscorp, escape the laboratories and defeat Venom.

1. Reach Oscorp

Follow the guide studs through the damaged streets. Hawkeye's explosive arrows destroy the silver billboard framework; shoot the exposed arrow sockets to create poles. Cross with the acrobatic characters, then send Black Widow up the wall-jump panels. At the rooftop computer, rotate the circuit controls to shut off the electricity blocking the street.

Continue through the gate by pulling its attachment with Hawkeye's rope arrow. At Oscorp's security booth, activate Widow's cloak before approaching the scanner. Pull the lever inside to disable security and open the entrance. The cloak must be active before the camera detects her;

approaching visibly and then cloaking against a closed door is less reliable than stepping back and trying again.

2. Follow Green Goblin through the offices

Use Widow at the first security console and repeat the displayed colour sequence. Watch the flashing pattern rather than relying on a remembered button order. In the next office, pull the attachments and explode the silver container with Hawkeye. Build the new console and solve its colour sequence with Widow.

When a shutter drops across the corridor, Spider-Sense reveals web handles. Pull it down. Hit Green Goblin with a ranged attack in the next room to make him retreat and destroy the lift. Spider-Man then reveals the climbable wall in the shaft, climbs up and breaks the panel covering a lever. Pull it to lower a ladder.

Blast the silver cover above, create the climbing-web route and pull the next attachment to form a walkway. Farther along, Spider-Man reveals and removes another cover; Hawkeye explodes the silver mechanism behind it. Cloak Widow through the next scanner and pull the lever. Use the newly accessible web handles to open the route into Goblin's trap.

3. Escape the basement

You land in a compactor, but the solution is construction rather than a frantic jump sequence. Destroy the breakable engine and use Hawkeye on the silver container overhead. Assemble a ladder and climb out. Avoid stepping into the black symbiote pools while fighting the creatures on the walkway.

At the OSCORP sign, shoot both silver supports. Spider-Sense reveals the attachments that let you pull down the sign assembly and make the route to the ladder. Climb to the upper walkway. Widow uses the console to turn the large cylinder; Hawkeye fills the exposed arrow sockets to make a pole route.

Swing across with Widow. Use her cloak to reach the guarded lever and pull it to release the final ladder. Climb out together. Whenever an arrow route seems incomplete, aim at every empty socket before attempting the jumps. A missed socket is easily mistaken for a difficult jump.

4. Restore power and clear the symbiote corridor

Follow the upper lab to the right. Spider-Man pulls the machine's twin handles, producing pieces for an arrow socket. Build it, shoot an arrow with Hawkeye, then use Widow to swing up to the computer. Rotate the circuit pieces into a continuous powered connection.

Return through the lab and clear the released enemies. Two pressure pads are inside the rooms on opposite sides of the large exit. Put one hero on each to open the door. In co-op, keep both players standing on their pads until the opening is usable.

The next corridor is blocked by symbiote matter. Break the nearby crate, wall sign and hatch, build the large speaker and pull its web handle. The sound clears the way. Continue to the final corridor, explode the two silver controls with Hawkeye and pull the exposed handles with Spider-Man. The resulting fire removes the final obstruction before Venom's arena.

5. Defeat Venom with sound and fire

Venom cannot be beaten by repeatedly attacking him while he is protected. Clear enough minions to work and watch for the objects released as the battle advances.

First, assemble the large sound system from the fallen pieces. Its noise stuns Venom and brings him within reach. Run over and attack him once the opening appears.

Next, survive until the rear chamber opens. Use the control inside to raise the flamethrower. Mount it, aim at Venom and burn him. When he drops down vulnerable, leave the device and land the follow-up hit.

For the final phase, use Spider-Sense near the hanging structure on the right. Pull its revealed handles to scatter pieces, build the bell and shoot its target with Hawkeye. The ringing stuns Venom for the final close-range attack. Each phase follows the same logic: trigger his weakness, then strike. The environmental effect alone is not the finishing blow.

Complete Free Play collection route

Follow these entries alongside the story route above. Complete each area's detours before taking its exit. For a challenge involving several objects, start at the first listed location and finish the whole set in the same replay. A challenge's reward may appear later than another numbered minikit.

Minikit 1: Oscorp labs: DNA machine

After the first door, enter the open lab at the rear. Magneto plugs the two large batteries into their sockets, opening the neighbouring lab. Use its console with a smart character. Match the sample: blue at the top, green in the middle, red at the bottom.

Minikit 2: Lift room: hidden shield switch

In the room where Goblin wrecks the lift, inspect the left wall beside the large hologram. Hulk pulls away the green-handled cover. Throw Captain America's shield into the revealed switch and collect the reward.

Minikit 3: First section: four gold frames

Melt the frame in the starting room, the one in the connecting corridor and the one on the right of the ruined lift shaft. The fourth is in the optional lab reached through the grate described in the next entry. Finish all four before entering the basement.

Minikit 4: Upper laboratory: electricity and claws

After climbing the broken lift, mind-control the scientist in the right-hand lab to operate his lever and expose a grate. Send Mister Fantastic through into the opposite lab. Activate the claw switch with Wolverine to reveal two generators, then charge both with Thor. Collect the minikit and destroy the fourth gold frame here.

Minikit 5: Basement: far-right dig spot

In the crusher/basement section, fly across to the small lower platform at the far right. Use the ladder if approaching on foot. Dig the soil with Wolverine to uncover the minikit.

Minikit 6: Basement: three mechanical spiders

Build all three spiders: enter the symbiote passage exposed by smashing containers on the left middle walkway, then break the objects inside; turn the purple valve on the upper-right with Jean Grey and build the dropped pieces below; smash the cracked wall at the far upper-right with Hulk and build its pieces.

Minikit 7: Cells: freeze and thaw

After the symbiotes break out, look inside their cells for a puddle. Freeze it with Iceman, then melt the new ice block with Mark 42's heat beam. Pick up the released minikit.

Minikit 8: Cells: gold ceiling vent

In the bright room at the far left of the cell area, near the floor button, aim upwards. Melt the gold vent/container on the ceiling and collect the minikit that falls out.

Minikit 9: Pod corridor: paired rescue reward

Before the Venom arena, use Magneto on the blue-metal container on the left. Activate the exposed claw switch with Wolverine to open the pods. Collect the minikit from the pod opposite Stan, and check that his rescue has also registered.

Stan Lee in Peril

In the corridor just before Venom, Stan is inside one of the pods. Magneto opens the blue-metal cover; Wolverine operates the claw switch underneath. The pods open together, freeing Stan and giving access to minikit 9. Wait for both rewards to register.

Minikit 10: Venom arena: cosmic door

Fly to the upper rear walkway during the boss encounter. Smash the crates and other obstructions, then use Galactus to assemble the cosmic doorway mechanism. Enter the opened side room and take the minikit before ending the fight.

Final completion check

Before the final boss hit or exit, confirm 10/10 minikits and the Stan Lee rescue message. Confirm the 100,000-stud True Believer target has registered, either on this run or an earlier saved run. Finish the mission if you still need its story-completion Gold Brick.

If the story is already complete, use the pause menu's exit/return option and choose Save and Exit to keep new collectibles. Wait for saving to finish. Previously collected minikits are replaced by studs on later visits, so check the saved counter instead of expecting every canister to remain visible. If a multi-object challenge is incomplete, finish it before leaving.

These checks complete this story mission. There are no Deadpool red bricks or separate Free Play character-token hunts in these 15 main story levels. Bonus missions, Manhattan activities, character purchases and other hub collectibles are separate requirements for 100% of the entire game.
